Medical Isolated Power Panels Overview

Controlled Isolated Power Panel

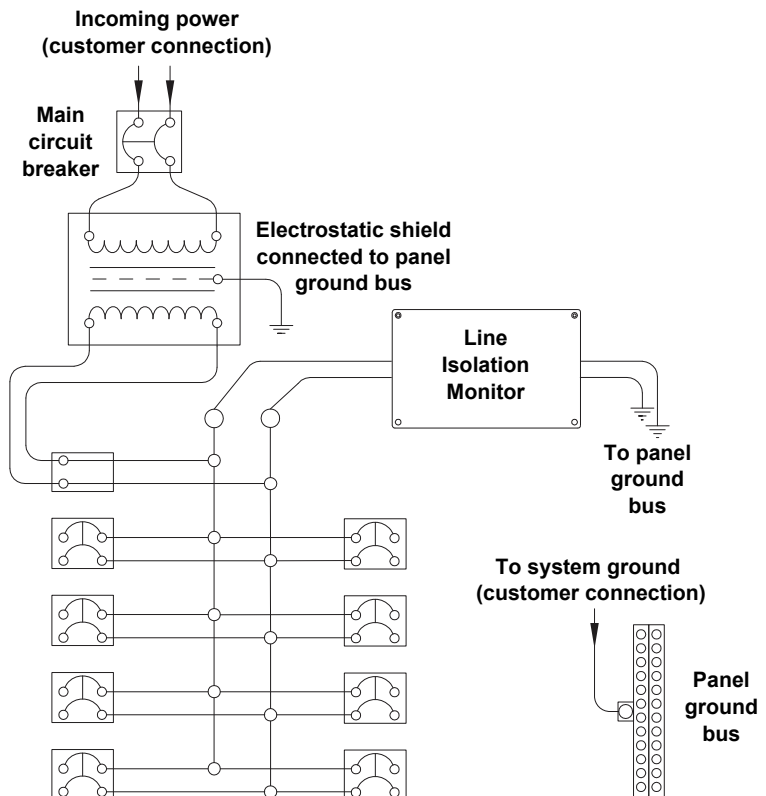

Isolated Power Systems

Isolated power systems offer an invaluable advantage in medical settings—early detection allows critical systems to remain online when hazardous current is present. The system gives a visual indication of the level of current in milliamperes (mA). If the system reaches a threshold of 3.7 mA, the visual and audible alarm indicates the presence of an excessive amperage level instead of disconnecting the circuit. These systems provide isolated power in operating rooms and other critical areas.

An isolation transformer serves a single operating room, except when supplying equipment requiring 150 V or higher (example: receptacles for laser/X-ray machines).

A line isolation monitor (LIM) indicates possible leakage or fault currents from all isolated conductors to ground.

- A green LED remains lit when the system is adequately isolated from ground.
- Under normal voltage conditions, a red LED lamp and audible warning signal activate when a fault hazard current (fault leakage current only) reaches a threshold value of 3.7 mA, or when the total hazard current reaches a threshold value of 5.0 mA.
- A digital display indicates the total hazard current of the system.

For questions, further assistance, or additional equipment or custom requirements, please contact your local Schneider Electric representative.

Panel Types

Standard Panels

Standard panels offer the most compact solution for a single isolated power system.

- Available in four options: 3, 5, 7.5, or 10 kVA
- Up to 16 circuits

Duplex Panels

Duplex panels offer two isolated power systems in a single panel. The systems are separated from each other by a barrier. For example, they can be used to enclose a standard and an emergency isolated power system in a single back box with common trim.

- Each panel supplies both 120 V and 208 V
 - 120 V system has up to 16 circuits
 - 208 V options include:
 - 5 kVA system with a 30 A secondary main in a 16-circuit panelboard
 - 7.5 kVA system with a 40 A secondary main in a 16-circuit panelboard
 - 10 kVA system with a 50 A secondary main in a 16-circuit panelboard
- Duplex panels are used when multiple panels are required in an operating room and/or more than 16 circuits are required

Dual Voltage Panels

Dual voltage panels supply both 120 V and 208 V isolated power to an operating room.

- Back box requires a 14-inch-deep wall
- Each panel supplies up to 16, 120 V circuits, plus
 - One 30 A, 208 V circuit for equipment such as a laser receptacle
 - One 50 A, 208 V circuit for equipment such as an X-ray receptacle

Controlled Panels

Controlled panels are designed to provide 208 V of isolated power to multiple areas from one central location. They can be used to add 208 V to existing rooms.

Medical Isolated Power Panels Components

Isolated Power Panel Components

(Feeding 120, 208, or 240 V power circuits)

Isolation Transformer

Hospital-grade isolation transformers from Schneider Electric provide isolation between system voltage and load requirements.

- Single-phase
- kVA range: 3, 5, 7.5, 10, 15, 25 kVA
- Primary voltages: 120, 208, 240, 277, or 480 V
- Secondary voltages: 120, 208, or 240 V
- Class 180 insulation
- Electrostatic shield
- Maximum sound level of 35dB
- Low leakage
- Compliance with UL 1047 (tables 30.1 and 30.2) and CSA Z32.2

NQ Panelboard Interiors

Schneider Electric has designed a single-phase, NQ panelboard interior for use in isolated power panels.

- Accepts plug-on or bolt-on branch circuit breakers
- 100 A interiors

QO™ Branch Circuit Breakers

- 10k AIR
- QO (plug on) or QOB™ (bolt on)
- 20 A; 2-pole (120 V)
- 20, 30, 50 or 60 A; 2-pole (208 or 240 V)

QO

QOB

Primary Circuit Breakers

PowerPact H-frame

- QO circuit breakers for 120, 208, and 240 V systems
- PowerPact™ H-frame circuit breakers for 277 and 480 V systems
- 2-pole; size is based on transformer kVA and chosen primary voltage

Iso-Gard™ Series 6 Line Isolation Monitor (LIM)

- Automatic operating voltage selection reduces repairs and technical calls and increases customer satisfaction.
- Automatic self test with data logging reduces time required to perform periodic testing.
- Communications bus provides centralized monitoring of LIM installations to improve predictive maintenance.
- Built-in ground fault location system reduces the time required to locate detected fault(s).
- Plain text menu interface makes setting easier and alarms clearer.
- Electrical system measurements help determine the root cause of a detected fault.

Feature	Value	Feature	Value
Measuring range Z_{ISO}	10–999 kW	Load current monitoring	Yes
Measuring range R_{ISO}	20–999 kW	Transformer temperature monitor	Yes
Measuring range C_{LEAK}	10–200 nF	Automatic operating voltage selection	Yes
Trip time (0 - > 5 mA)	3.5 sec.	Automatic self test	Yes (selectable time)
Trip tolerance (THC)	4.5–5 mA	Line to line voltage measurement	70–276 V
Detected fault location	Yes	Line to ground voltage measurement	> 0–276 V
Event memory with time stamp	Yes	Detected faulty line indication	Yes
Communication bus compatibility	Full	Select different measuring frequencies	Yes
Device settings	Plain text	Split core measuring current	Yes

Medical Isolated Power Panels Components

The following drawing shows some of the components typically installed in a power panel (in this case, a standard isolated power panel with enhancements). Use this page as a reference to help identify the components shown in the outline drawings on pages 10, 14, 19, and 24.

Typical Panel Components

Features and Options

Standard Isolated Power Panel

- Iso-Gard Series 6 line isolation monitor
- Primary circuit breaker
- Eight 20 A, 2-pole, Square D™ brand branch circuit breakers
- Mounting provisions for eight additional 20 A, 2-pole circuit breakers
- Reference ground bar with 20 terminals
- Designed for 120 V applications
- Available in 3, 5, 7.5, and 10 kVA

Ideal for operating rooms or critical areas

Standard Panel Enhancements

- Field convertible up to (16) 20 A, 2-pole, Square D™ brand branch circuit breakers
- Receptacles
 - Red or ivory
 - Duplex or single
 - Twist-lock
- Power and ground modules
- Optional bolt-on circuit breakers

Allows for centralized location of receptacles and ground jacks

Accessories

- Power and ground modules
- Hospital-grade ground cords
- Remote indicator
- Remote annunciator stations

Configurations

Standard Isolated Power Panel							Enhancements	
kVA	Primary Voltage	Secondary Voltage	Mounting	Circuit Breakers	No. of 20 A, 2-pole Circuits	Ground Bar	120 V Receptacles	Ground Jacks

Outline—Standard Isolated Power Panel with Enhancements

Features and Options

Duplex Operating Room Panels

Ideal for locations where space is limited, for renovations, or for minimizing leakage current on the individual panel and transformer.

Each panel features the following items:

- Iso-Gard™ Series 6 line isolation monitor
- Primary circuit breaker
- Eight Square D™ brand, 20 A, 2-pole, branch circuit breakers
- Mounting provisions for eight additional 20 A, 2-pole circuit breakers
- Reference ground bar with 20 terminals
- Designed for 120 V applications
- Available in 3, 5, 7.5, and 10 kVA

Duplex Panels—only one back box and trim piece required for two Isolated Power Systems

- Transformer—two required (one for each system)
- Interior—two mains, two LIMs, two panelboards, two ground bars mounted on one common back plate
- Single trim
- Single back box

All items must be ordered as separate line items.

Configurations

Duplex Operating Room Panel						
kVA	Primary Voltage	Secondary Voltage	Mounting	Circuit Breakers	No. of 20 A, 2-pole Circuits	Ground Bar
3	120					
5	208	120	Flush	Plug-on	8 factory-installed	Standard
7.5	240	208	Surface	Bolt-on	Up to 8 additional field-installed	
	277	240				
10	480					

- Back box for all duplex panels: Flush-mount—SB713408; Surface-mount—SB713408S
- Trim for all duplex panels: Flush-mount—ST7336; Surface-mount—ST7134
- Units are available in any combination of primary voltages and kVA ratings.

Outline

Dual Voltage Isolated Power Panels

Combines standard (120 V) and controlled (208 or 240 V) panels into one space-saving solution.

- Primary circuit breaker
- 120 V output
 - Iso-Gard Series 6 line isolation monitor
 - Eight Square D™ brand, 20 A, 2-pole, branch circuit breakers
 - Mounting provisions for eight additional 20 A, 2-pole circuit breakers
 - Reference ground bar with 20 terminals
 - Available in 3, 5, 7.5, and 10 kVA
 - Up to eight receptacles
 - Up to eight ground jacks
- 208 or 240 V output
 - Iso-Gard Series 6 line isolation monitor
 - Two Square D™ brand, 2-pole, branch circuit breakers
 - **Typical Layout of Branch Circuits:**
 - two 30 A circuit breakers
 - one 30 A circuit breaker, one 50 A circuit breaker
 - one 30 A circuit breaker, space only for second circuit breaker
 - one 50 A circuit breaker, space only for second circuit breaker
 - Reference ground bar with 20 terminals
 - Customized control to meet customer requirements
 - Available in 15 kVA
 - One or two laser outlets

Dual Voltage Panels—120 V distribution plus two circuits of 208V or 240V

kVA Ratings

5/15 kVA—20 kVA Primary, 5 kVA 120 V Secondary, 15 kVA 208 or 240 V Secondary

7.5/15 kVA—22.5 kVA Primary, 7.5 kVA 120 V Secondary, 15 kVA 208 or 240 V Secondary

10/15 kVA—25 kVA Primary, 10 kVA 120 V Secondary, 15 kVA 208 or 240 V Secondary

Options

- 208/240 branch circuits can be changed to any combination of 20, 30, 50, or 60 A circuit breakers. Please use the Product Selector to obtain the combination required.
- Available with factory-installed power modules.
 - Receptacle 0 to 8—Red Duplex, Ivory Duplex, Red Single, Ivory Single, Black Twist Lock
 - Ground modules 0 to 8
 - 208 V and 240 V receptacles
 - NEMA 6-15R, NEMA 6-20R, NEMA 6-30R, NEMA 6-50R
 - NEMA L6-15R, NEMA L6-20R, NEMA L6-30R
 - Hubbell CS8269, Hubbell IN16494

Medical Isolated Power Panels Dual Voltage Panels

Outlines

Dual dimensions: Inches
(mm)

Controlled Isolated Power Panels

Panels with circuit control have a secondary circuit breaker that is connected to a maximum of eight branch circuits. The configuration of which circuits receive power is made at the factory to meet customer requirements. The selection of a secondary circuit is typically door-contact-controlled at the individual receptacle station or from a push button station built into the isolated power panel. No power will be delivered to a secondary circuit until the secondary breaker is closed.

- Iso-Gard Series 6 line isolation monitor
- Primary circuit breaker
- Eight Square D™ brand, 20 A, 2-pole, branch circuit breakers
- Mounting provisions for eight additional 20 A, 2-pole circuit breakers
- Reference ground bar with 20 terminals
- Designed for 208 or 240 V applications
- Customized control to meet customer requirements
- Available in 7.5, 10, 15, or 25 kVA
- Ideal for X-ray and laser equipment; control option is available for supplying power to portable equipment
- Customized control option—programmable logic controller (PLC) to interface with the 208/240 V receptacle module accessory

Configurations

Controlled Isolated Power Panel								X-Ray Module		
kVA	Primary Voltage	Secondary Voltage	Mounting	Type of Control PLC	No. of Laser Circuits	No. of Hot Circuits	Secondary Breaker	Quantity	Mounting	Type of Power Receptacle
7.5	208	208 240	Flush Surface	Door contact with lamp Door contact without lamp	1-8	1-6	20 A 30 A 50 A 60 A	Match circuits	Recessed Surface	NEMA #6-15R or #L6-15R
10	240									NEMA #6-20R or #L6-20R
15	277									NEMA #6-30R or #L6-30R
25	480									NEMA #6-50R Hubbel #IN16494

Units are available in other combinations of branch breakers, simultaneous circuits are limited to the number shown in the following table.

kVA	Secondary Voltage	Maximum Number of Branch Circuits			
		20 A	30 A	50 A	60 A
5	208	1	1	0	0
	240	1	1	0	0
7.5	208	2	1	0	0
	240	1	1	0	0
10	208	2	1	1	0
	240	2	1	1	0
15	208	4	2	1	2
	240	3	2	1	2
25	208	6	4	2	2
	240	6	4	2	2

NOTE: Also available with 240 V secondary.

Outline

PLC Control Panel, Factory-Wired for Eight Circuits

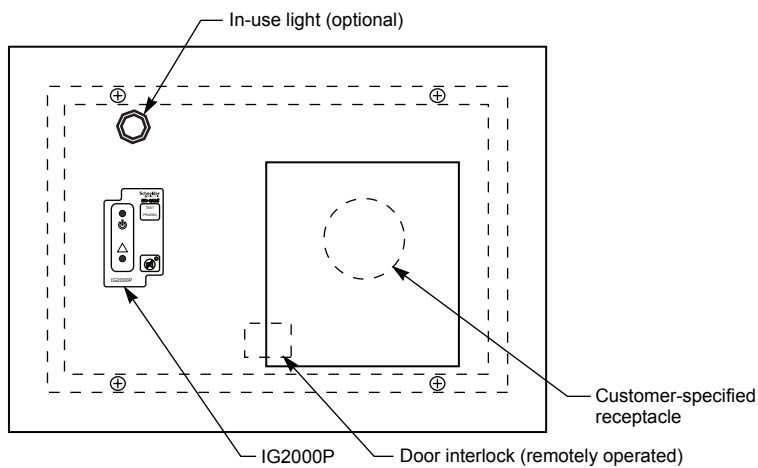

Features and Options

Medical Isolated Power Panels X-Ray/Power Receptacle Modules

X-ray/laser power receptacle modules from Schneider Electric provide a convenient source of power for portable X-ray and laser equipment. The hospital-grade receptacle provided in each module is matched to the NEMA plug configuration of the equipment with which it will be used. The recessed power receptacle is mounted behind the door on the stainless steel faceplate. The door features a concealed hinge and a touch latch.

- Designed for flush- or surface-mounted applications
- Available options:
 - Iso-Gard™ IG2000P remote indicator
 - “In-use” lamp; when illuminated, indicates the receptacle cannot be used
 - Door contact (limit switch)
- UL Listed (UL1047)
- Five-year limited warranty

Overview and Ordering Information

Medical Isolated Power Panels Power and Master Grounding Station Modules

Power Modules

Where room ground extensions and power receptacles are both required, these modules offer convenience and save labor in field wiring. Each unit includes four power receptacles, four twist-to-lock ground jacks, and a ground bus, along with a generous number of lugs for external ground connections.

The main ground connection in the module accommodates up to a 1/0 AWG cable. The unit is completely factory wired—only field power connections and ground connections are necessary. The front trim is #304 stainless steel with a #4 brushed finish.

Master Grounding Station Module—120 Series

These modules can be used as a collection point for grounds in a large area, such as a coronary care unit or intensive care ward. The primary application is where the equipment ground bus in the emergency distribution panel is not conveniently located or cannot accept the large number of connections required for the area.

This unit can be connected to the ground point by a single conductor and located in a more convenient area. The module contains a bus bar with 18 lugs for field connections and has a Type #304 brushed stainless steel cover plate. It is designed for installation into a 12 in. x 8 in. x 4 in. back box.

Any combination of eight receptacles or ground connectors is allowed via the Product Selector.

Description	Catalog No.	Back Box Cat. No.
Power module, 4 ground connectors, 4 duplex red, flush-mounted	SGPMF4DR4	SB120804

IGT Dual Clock/Timer

IGT1550 Remote

Iso-Gard™ IGT Dual Clock/Timer Kit

Features

- Bright-red LED display for enhanced readability under the intense lighting conditions found in hospital operating rooms
- 12/24 hour selectable mode
- Power outage backup for at least 24 hours without batteries
- Designed for flush wall mounting

Ordering Information

Description	Catalog No.
Dual clock/timer with one IGT1550 remote control, stainless steel faceplate, and galvanized steel backbox	IGT

Schneider Electric offers two remote indicators for interfacing with line isolation monitors: the Iso-Gard™ IG2000P and IG2000CBM.

IG2000P Remote Indicator

The Iso-Gard™ IG2000P remote indicator from Schneider Electric provides remote indication of the visible and audible alarms from a line isolation monitor (LIM).

- Green LED—stays illuminated while the system is in normal condition
- Red hazard LED—illuminates when the Total Hazard Current exceeds the preset alarm level
- Audible hazard alarm—sounds when the Total Hazard Current exceeds the preset alarm level
- Mute button with yellow LED—silences the audible alarm on the remote indicator (local muting), or silences all audible alarms in the system (system muting)
- Test button—remotely performs a functional test of the LIM

The IG2000P remote indicator is available mounted in a one- or two-gang stainless steel faceplate for flush mounting into a panel or wall box with a two-inch minimum depth. The basic electrical connection is made using three wires.

Features

- Interfaces with all Iso-Gard LIMs from Schneider Electric (Series 1, A, B, C, D, and 6), as well as with LIMs from other manufacturers
- Does not interfere with medical equipment
- Uses low voltage wiring (12 Vdc or 12 Vac)
- Mounts to a standard, electrical gang box
- Connects by means of a screw terminal strip
- Uses long-life, LED displays
- Features a rugged, easy-to-clean, stainless steel and Lexan design

Mounting	Catalog No.
Customer-supplied single gang box or equivalent	IG2000PG1
Customer-supplied two gang box or equivalent	IG2000PG2
Customer-supplied four gang box or equivalent	IG2000PG4
Designed to mount in legacy Square D™ brand isolated power panel	IG2000PPM
Designed to mount in legacy Square D™ brand backbox (catalog no. 53008BB)	IG2000PST0614

IG2000CBM Remote Indicator

The Iso-Gard™ IG2000CBM remote indicator from Schneider Electric provides remote indication of the visible and audible alarms and digital mA reading from an Iso-Gard Series 6 (IG6) line isolation monitor (LIM).

- Green LED—stays illuminated while the system is in normal condition
- Red hazard LED—illuminates when the Total Hazard Current (THC) exceeds the preset alarm level
- Audible hazard alarm—sounds when the THC exceeds the preset alarm level
- Mute button with yellow LED—silences the audible alarm on the remote indicator (local muting), or silences all audible alarms in the system (system muting)
- Test button—remotely performs a functional test of the LIM
- Digital display—shows the THC in real time

The IG2000CBM remote indicator is available mounted in a two-gang stainless steel faceplate for flush mounting into a wall box with a two-inch minimum depth. The basic electrical connection is made using four wires.

Features

- Interfaces with the Iso-Gard Series 6 LIM from Schneider Electric
- Does not interfere with medical equipment
- Uses low voltage wiring and RS-485 wiring
- Mounts to a standard, electrical two-gang box
- Connects by means of a screw terminal strip
- Uses long-life, LED displays
- Features a rugged, easy-to-clean, stainless steel and Lexan design

Mounting	Catalog No.
Customer-supplied two gang box or equivalent	IG2000CBMG2
Customer-supplied four gang box or equivalent	IG2000PCBM4
Designed to mount in legacy Square D™ brand isolation panel	IG2000CBMPM
Designed to mount in legacy Square D™ brand backbox (catalog no. 53008BB)	IG2000CBMST0614

Miscellaneous Technical Information

UL Listed System, Including Primary Disconnect Device

The primary disconnect device is sized via the UL File and Testing to provide the full capacity of the system. Since the National Electrical Code (NEC) requires the system to be UL Listed, changes cannot be made to the system. The primary device must be sized by the manufacturer and must comply with its third party filing.

Installing and Connecting Isolated Power Systems

Overall System Recommendation

- Do not place power and control wiring in the same conduit

Conductors

The impedance (capacitive and resistive) to ground of either conductor of an isolated power system must exceed 200,000 ohms when installed. The installation at this point will include receptacles, but is not required to include lighting fixtures or fixture components.

Schneider Electric provides the following additional recommendations:

- Limit 120 V systems to 10 kVA (NEC informational note)
- Minimize the number of circuits (no more than the eight factory-installed branch circuit breakers)
- Minimize the length of conductors
- Do not splice conductors. If you must splice, use compression connectors to minimize the impact.
- Use conductor insulations with a dielectric constant less than 3.5 and an insulation resistance constant greater than 6100 megohm-meters (XHHW or XHHW-2).
- Do not use wire-pulling compound as it may increase the dielectric constant.
- Use conductors with the following colors:
 - Orange with at least one distinctive colored stripe other than white, green, or gray
 - Brown with at least one distinctive colored stripe other than white, green, or grayStripes were added in the 2008 NEC; the previous code requirements were orange and brown.
- Use ¾ in. conduit containing no more than six conductors to minimize leakage.

Control Wire

Use the following wiring/items to connect components of the isolated power system.

Connection between Line Isolation Monitor and Composite Units

- IG2000P—Standard control wiring
- IG2000CBM—RS-485 (shielded twisted pair) and control wiring

Connection between Line Isolation Monitor and Nurse's Station

- Standard control wiring

Medical Isolated Power Panels

Miscellaneous Technical Information

Line Isolation Monitor (LIM)

- Factory settings include a password. For information, please see the *Menu: SETTING / PASSWORD* section in instruction bulletin MED1011010x.
- Error code 8.80 means the clock has reverted to factory settings and needs to be reset. Please see the *Detected Error Codes and Troubleshooting* section in instruction bulletin MED1011010x.
- The LIM alarms when the set leakage current threshold is exceeded. Common causes of this include:
 - Equipment discharging to ground. For example, an internal surge protective device or uninterruptible power supply (UPS). These types of devices should not be connected to an isolated power system.
 - Portable carts containing power strips, UPS systems, GFCIs, etc. Do not use portable carts containing such items with an isolated power system.
 - Input voltage is outside of the device ratings in either amplitude or frequency.

Isolated Power System

- Ungrounded System
 - Since there is no reference to ground, measurements between conductors and ground will vary and do not give relevant information.
 - Two-pole breakers require both conductors to be disconnected together.
 - Surge protective devices are designed for grounded systems and cannot be incorporated in an isolated power system.
 - UPS devices require ground systems and cannot be connected to an isolated power system.
 - An isolated power system is an alternative to a GFCI system for wet locations. GFCI outlets and/or circuit breakers cannot be connected to an isolated power system.
- Transformer Compartment
 - Can be used for wireway to the left and right of the transformer, aligning with the wire access point on the drawing vertically.
- Lighting Circuits
 - Should not be connected to an isolated power system.
